                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurocoxin type A (BONT/A). An isolated antibody expressed by a clone chosen from clone specifically binds to an epitope specifically binds to an epitope (25, 225, 239, 106, 302, 84, 187, huc25, Ari, Ari, Mri(Y), 3-1, 28, 3-10 and ING1, where (I) binds to and neutralises botulinum clone comprising BONT/A neutralising epitope having an epitope that is comprising BONT/A neutralising epitope having an epitope that is comprising BONT/A neutralising epitope having an epitope that is comprising BONT/A neutralising epitope having an epitope that is comprising I); and a composition (III) comprising several anti-confilmum neutrotoxin antibodies, where each antibody is specific for a different epitope of a botulinum neutralisation than the single antibodies shows greater toxin neutralisation than the single antibodies shows greater toxin neutralisation than the single antibodies shows greater toxin neutralisation than the comprising (I); and a kit comprising (I) is useful for neutralising BONT/A antibody and for neutralising a botulinum neutotoxin which is precific for a different epitope of the botulinum neutotoxin which is precific for a different epitope of the botulinum neutotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplue. (I) is useful for diagnosing the botulism correcting pathologies specificity and affinity towards BONT/A. (I) enables rapid detection or diagnosing the botulism. This is the amino acid condensition or antibodies specificity and affinity towards BONT/A. (I) enables rapid detection or diagnosic, it is expecificated with botulism. This is the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                     antibacterial; antibody; botulinum neurotoxin type A; BONT/A; BONT/A neutralising epitope; anti-botulinum neurotoxin antibody; toxin neutralisation; botulinum neurotoxin poisoning; mouse; light chain variable region; single chain antibody; scFv.

The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthxitis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans. The present sequence represents the light chain variable region of Ig REI, and is used in the course of the

The invention comprises anti-protein C inhibitor (PCI) antibody. The anti-PCI antibody of the invention is useful for treating or preventing a disease which develops and/or progresses due to reduced activated protein C (aPC) activity. Such diseases include: sepsis, disseminated intravascular coagulation, and arterial thrombosis. The present amino acid sequence represents a mouse anti-protein C inhibitor antibody.
                                                                                                                                                 New anti-protein C inhibitor (PCI) antibody, inhibiting PCI with respect to activation protein C (apc) activity, and apc production by thrombin/thrombomodulin composite, useful for treating sepsis, arterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibacterial; antibody; botulinum neurotoxin type A; BONT/A; BONT/A neutralising epitope; anti-botulinum neurotoxin antibody; toxin neutralisation; botulinum neurotoxin poisoning; mouse; light chain variable region; single chain antibody; scFv.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the light chain of the humanised 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic achima and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anti-protein C inhibitor antibody, anti-PCI antibody, activated protein C; aPC; sepsis; disseminated intravascular coagulation; arterial thrombosis; protein C inhibitor; mouse; murine.
              Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.

clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone 525, C25, C39, IC6, 3D12, B4, IP3, huC25, Ari, Ar2, WRI(V), WRI(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising pitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition comprising several models in surplus. The following are disclosed: a pharmaceutical composition comprising (I); and a kit comprising (I). (I) is useful for neutralising specific for a different epitope of the botulinum neurotoxin which involves contacting neurotoxin with (I) is useful for diagnosing the botulism combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin and the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin condiction or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The signal sequence is also provided in AAR70194. The sequences of the 3 CDRs are dentical to mouse anti-human II-4 MAD 3B9 light chain CDRs (given in AAR70195-97). (Updated on 25-MAR-2003 to
                                                                                                           The sequences given in AAR29008-09 were encoded by plasmids which were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-6R). The antibody comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma AUK64-7 which contained the plasmids p64-K4 and p64-h2. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence for the light chain of muM4TS.11, a novel antibody which specifically binds to the platelet derived growth beta receptor (PDGF*R beta). but not within the fifth extracellular 19-like domain, where the antibody inhibits PDGF BB-induced proliferation of a cell expressing the PDGF beta receptor. The antibody can be used in a method of inhibiting intimal hyperplasia in the vasculature of a mammal. The antibodies can be used for the treatment of disorders related to PDGF activity such as disorders involving proliferation of smooth muscle cells, and including restenosis following angioplasty
                                                                                                                                                                                                                       MuM4TS.11; antibody; platelet; beta receptor; PDGF-R beta; inhibition; intimal hyperplasia; vasculature; restenosis; angioplasty; light chain.

Antibodies to platelet derived growth factor beta receptor - inhibit PDGF BB-induced proliferation of cells expressing the receptor, used particularly for inhibiting intimal hyperplassa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence for the light chain of HuM4TS.11, a novel antibody which specifically binds to the platelet derived growth beta seceptor (PDGF-R beta), but not within the fifth extracellular 19-1ike domain, where the antibody inhibits PDGF BB-induced proliferation of a cell expressing the PDGF beta receptor. The antibody can be used in a method of inhibiting intimal hyperplasia in the vasculature of a mammal. The antibodies can be used for the treatment of disorders related to PDGF activity such as disorders involving proliferation of smooth muscle cells, and including restenosis following angioplasty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Optionally Val at position 62 of the mature

They are also useful in the production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA molecules encoding recombinant antibodies useful for treating IL4

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic eachman and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the light chain of the humanised 3B9 antibody of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recombinant IL4 antibodies useful for tratment of allergic rhinitis, atopic ashthma and anaphylactic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

```
The present sequence represents the light chain variable region of murine interleukin-4 (IL-4) antibody 3B9. The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antibody; interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autojummune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                               New DNA molecules encoding recombinant antibodies useful for treating IL4
chimeric antibody, humanised antibody, IL-4 mediated allergic reaction, Immunoglobulin E-mediated allergic reaction, allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma; anaphylactic shock; rheumatoid arthritis, host-versus-graft disease; renal disease; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 50; DB 2; Length 132;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Spleen cells from mice immunized with human IL-4 were used to prepare hybridomas, which were screened for anti-IL-4 MAb secretion. Only clone 3189 was positive. cDNA clones of the 3189 light and heavy chains were cloned into pGBN7f+ and transformed into B. coll DH5-alpha. The clones were sequenced (AAQ83490-91), and used for antibody engineering. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric and humanised IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of IL-4-mediated and IgE-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

This introlled teacher to the movel treatment. Specifically, it refers
to a peptide autoantigen that is linked to an antibody raised against an antibody presenting cell (APC) receptor. The present invention describes a method for treating diabetes mellitus by inducing an immune tolerance to an autoantigen, which can be chosen from glutamic acid decarboxylase (GAD), insulin or a heat shock protein (HSP), as well as epitopes derived from each thereof or beta cell antigens that are linked to an APC receptor antibody. In particular, the antibody recognises a receptor chesen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst cohers, which is expressed on the surface of the APC. The antibody autoantigen construct then works to interfere with the interaction between the APC and immune cells such as autoreactive T cells, and hence inhibits T-cell proliferation. Accordingly, such compositions exhibit antidiabetic and immunosuppressive activities and can be used in the development of vaccines. Note that the single chain antibodies (scrWs) used in this specification contain both variable light and heavy chain cegions of the receptor is preserved. This peptide sequence is a heavy contain antine anti-human DC-SIGNR (hDC-SIGNR) CDR3 peptide of the
antibody/autoantigen construct containing an autoantigen linked to an antibody to a receptor of an antigen presenting cell and administering the construct to a subject.
                                                                                                   This invention relates to the novel treatment of an autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune disease; antibody; antigen presenting cell; APC; diabetes mellitus; immune tolerance; antidiabetic; immunosuppressive; vaccine; hDC-SIGNR; IgGlk.

                                                                                                                                                                                                                                                                                                                            This sequence represents the light chain of the murine 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (1gB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic astma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Murine light chain CDR3 region IgG1k antibody binds hDC-SIGNR Seq 123.

that utilises an antibody, autoantigen construct. Specifically, it refers
to a peptide autoantigen that is linked to an antibody raised against an
antigen presenting cell (APC) receptor. The present invention describes a
method for treating diabetes mellitus by inducing an immune tolerance to
an autoantigen, which can be chosen from glutamic acid decarboxylase
(GAD), insulin or a heat shock protein (HSP), as well as epitopes derived
from each thereof or beta cell antigens that are linked to an APC
chosen from DerSiGNR, MHC, toll receptor or mannose receptor amongst
chers, which is expressed on the auritace of the APC. The antibody/
autoantigen construct then works to interfere with the interaction
between the APC and immune cells such as autoractiver Tealls, and hence
inhibits T-cell proliferation. Accordingly, such compositions exhibit
antidiabetic and immunosuppressive activities and can be used in the
cell vaccines. Note that the single chain antibodies (serve)
used in this specification contain both variable light and heavy chain
regions connected by a linker, their short length makes these antibody

                                                                                     A humanized antibody light chain variable region and signal sequence is given in AAR75355. The signal sequence is also provided in AAR70194. The sequences of the first 2 CDRs are identical to mouse anti-human IL-4 MAD. 3B9 light chain CDRs (given in AAR70195-96), but the third (AAR70201) differs by a single amino acid from the native mouse CDR (AAR70197). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA molecules encoding recombinant antibodies useful for treating IL4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Light chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (CDR) of the light chain variable region of murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They

differentiation (CD) positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the geparation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived complementarity determining region CDR-3 protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                  Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hemacopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; complementarity determining region; CDR-3; light chain; murine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a light chain complementarity determining region (CDR) from an antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody, interleukin-4; IL4; immunoglobulin B; IgB mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; actopic aethma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease; complementarity determining region; CDR.
are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                        Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant IL4 antibodies useful for tratment of allergic rhinitis, atopic ashthma and anaphylactic shock.
                                                                                                                                                        ö

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polymuclectides encoding different immunoglobulin binding protein (IgBP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transfected cells, to generate an IgBP that binds to a ligand, and transformed plant cells are selected, and preparing an IgBP array in plant cells. At least one peptide sequence has at least 7st sequence identity to a framework region (FR) of a native IgM, IgG, IgA, IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein array, preferably plant cells (e.g. insect cells or manalian cells). The CHBP is useful for cells or manalian cells). The CHBP is useful for preparing assays of IgBPs having desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. Sequences AAX59259-61 represent the complementarity determining region (CDR)-1, CDR -2 and CDR-3 fragments in the L chain variable region of the antibody 4H5 respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polynucleotides encoding binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunoglobulin, antibody; light chain; heavy chain; CDR; FR; complementarity determining region; framework region; IgBP; transgenic plant; immunoglobulin binding protein array; IgM; IgG; IgA; IgB; IgY; IgM; kappa; lambda; CHBP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                         ö
single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the L chain variable region of the antibody 4H5
                                                                                                                                                                                                                                       Gaps

The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention

The present invention relates to modified (e.g. deimmunised) antibodies are less immunogenic compared to the modified anti-PSWA antibodies are less immunogenic compared to the unmodified anti-PSWA antibodies. The modified antibodies comprise comprise complementarity determining regions (CDRs) from a non-human antibody (e.g. murine antibody J591,J415,J53 or E99), and framework sequences that are less immunogenic in humans (e.g. less antigenic than the murine frameworks in which a murine CDR naturally occurs). The modified antibodies bind with PWSA, preferably human PMSA, with high affinity and specificity. The anti-PMSA antibodies are useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatitis, benign enlargement, prostatic cancer or testicular cancer, or solid tumours, soft tissue tumours or metastatic lesions, and its associated pain. The present sequence represents a variable region from a murine antibody
                                                                                                                                                                                                                                                                                                                                                                                                                      prostate specific membrane antigen; immunogenic; CDR; murine; complementarity determining respion; JS91, G415, JS31, E99; mouse; prostatic disorder; cancerous disorder; genitourinary inflammation; prostatitis; benign enlargement; prostatic cancer; testicular cancer; solid tumour; soft tissue tumour; metastatic lesion; pain; analgesic; antiinflammatory; cytostatic; framework region; variable heavy chain; variable light chain, VU; variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           immunoglobulins, useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatitis, prostatic or testicular cancer.
                                                                                                                                                                                                                                                                                                                                                                                                        antibody; deimmunised antibody; anti-PMSA antibody;
 application for drugs. It is highly safe in human dose. The sequence represents a L chain fragment of the antibody 4H5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New modified anti-prostate specific membrane antigen (PSMA)

                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                              This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and

MI comprises contacting the cell, or a vascular endothelial cell proximate to the cell, with an antibody (or its antigen-binding fragment), which binds specifically to the extracellular domain of PSWA in an amount sufficient to ablate or kill the cell. The
                                                                                                                                                                                                                                                                                                                                                                                                                                    Mouse; murine; antibody; skin disorder; binding agent; PSMA; cytostatic; prostate specific membrane antigen; antibosoriatic; antiarthritic; dermatological; antiinflammatory; antiallergic; vaccine; dermal disorder; epidermal disorder; psoriasis; inflammatory disorder; epidermis; dermis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antibodies have antipociatic, antiarchritic, dermatological, cytostatic, antinflammatory and antiallergic activities, and can be used in vaccines. M1 is useful for treating a skin disorder in a subject, by administering to the subject, an amount of an antibody which binds specifically to the extracellular domain of PSMA (the subject is a mammal, preferably human and is having, or at risk of, a skin disorder). The skin disorder is a dermal or an epidermal disorder, and is selected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  from psoriasis (preferably chronic stationary psoriasis, psoriasis vulgaris, eruptive (gluttate) psoriasis, psoriatic erythroderma, generalised pustular psoriasis (Von Zumbusch), annular pustular psoriasis exfoliative dermatitis, pityriasis rubra pilaris, pityriasis rubra pilaris, pityriasis rubra pilaris, pityriasis rubra pilaris, pityriasis rosacea, parapsoriasis, pityriasis lichenoiders, lichen planus, lichen nitidus, ichthyosiform dermatosis, keratodermas, dermatosis, and prokeratosis, preferably psoriasis. Ni is useful for treating a skin disorder such as an inflammatory or neoplastic disorder of the epidermis or dermis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ablating/killing aberrant prostate specific membrane antigen-expressing cells for treating skin disorders, by contacting the cell with an antibody that binds to the extracellular domain of prostate specific

The invention relates to the use of an anti-prostate specific membrane antigen (anti-PSMA) antibody or antigen-binding fragment for treating prostate cancer, monitoring a patient receiving an anti-PSMA antibody to treat prostate cancer, or selecting a patient for treatment with an anti-PSMA antibody. Also included are a method of treating prostate cancer in a subject, a method of monitoring a patient receiving an anti-PSMA antibody to treat prostate cancer and a method of selecting a patient for treatment with an anti-PSMA antibody. Also disclosed are anti-PSMA antibody or antigen-binding fragment is a human antibody or antigen-binding fragment is a human antibody. Cor antigen-binding fragment. The modified antibody or antigen-binding fragment has one or more CDRs (complementarity determining region) from a mouse amonoclonal antibody. Complementarity determining region) from a mouse amonoclonal antibody or antigen-binding fragment has one or more CDRs (complementarity determining region) from a mouse amonoclonal antibody or selected from US91, J415, J533, or E99. The anti-PSMA antibody or antigen binding fragment is useful for treating prostate cancer, monitoring a patient receiving an anti-PSMA antibody to treat prostate cancer, or selecting a patient for treatment with an anti-PSMA antibody. The present sequence is a mouse kabat subgroup consensus sequence for a light or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of treating or preventing an insulin-
related disorder in a subject which comprises administering an antibody
or its antigen-binding portion specific for prostate specific membrane
antigen (PSMA). The method is useful for treating an insulin-related
disorder, including obesity, hyperglycaemia, hypoglycaemia,
hyperinsulinaemia, insulin-resistence, impaired glucose colerance,
impaired fasting glucose. Type I diabetes mellitus, Type 2 diabetes
mellitus, and gestational diabetes. The present sequence represents Kabat
heavy chain variable region used to compare to a sequence from one of the mouse monoclonal antibodies listed above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of anti-prostate specific membrane antigen antibodies for treating or preventing insulin-related disorders, e.g. obesity, hyperglycemia, hyperinsulinemia, insulin-resistance, or Type 1 or 2 diabetes mellitus.
                                                                                                                                                                                                                                                                  obesity; hyperglycaemia; hypoglycaemia; hyperinsulinaemia; insulin-resistance; impaired glucose; the i diabetes mellitus; Type I diabetes mellitus; Type 2 diabetes mellitus; gestational diabetes;

This sequence is the light chain variable region of a preferred anti-CD4 monoclonal antibody for use in the claimed synergistic composition. MAD MT 3.10 is deposited as clone 3.101/SB10 (ECACC 90090702). The anti-CD4 antibody is used with at least one anti-ILZR alpha or beta antibody. Individually the antibodies are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response. See also AAQ36608-Q36616. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synergistic antibody compsn. for use as immunosuppressant - comprises monoclonal anti-CD4 antibodies and monoclonal anti-IL2R alpha- or anti-IL2R beta antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The present sequence represents the light chain variable region of a humanised murine interleukin-4 (IL-4) antibody 389. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, vestus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA molecules encoding recombinant antibodies useful for treating IL4 liated conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antibody; interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A humanized antibody light chain variable region and signal sequence is given in AAR75355. The signal sequence is also provided in AAR70194. The sequences of the first 2 CDRs are identical to mouse anti-human IL-4 MAb 3B9 light chain CDRs (given in AAR70195-96), but the third (AAR70201) differs by a single amino acid from the native mouse CDR (AAR70197).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chimeric and humanised \rm IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of \rm IL-4-mediated and \rm IgE-mediated allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the rollection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                               Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the light chain of the humanised 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cluster differentiation, cell separation, antibody, CD4, CD34, leukemia; hematopoietic, undifferentiated, lymphocyte; bone marrow transplantation, HIV infection, autoimmune disease; murine.

The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the L chain sequence of the antibody 4H5
                                                                                                                                                                                                                                                                         An antibody and the nucleic acid coding the antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                             ö
         differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for druga. It is highly selfe in human dose. The present sequence represents the H chain sequence of the antibody 4H5
                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
This invention describes a novel device (I) for separating cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          6

                      AAR86140-R66146 are peptides complementary to the variable region of th CD-4 antibody, these peptides are fixed onto a claimed nonwoven fabric (average fibre dia. of 1-30 microns) coated with keto-alkyl halide functional groups. This material can be used as a filter for CD-4 positive cells in a medical treatment involving the extra-corporeal circulation of blood

This is the amino acid of complementarity determining region 3 (CDR-L3) of the light chain (see AAW83042) of murine anti-human Fas monoclonal antibody HFS7A. The invention relates to antibodies, especially humanised antibodies see AAW83031-37), recognising the Fas antigen. Such antibodies preferably comprise a heavy chain and a light chain including comprise a heavy chain and a light chain including comprise a heavy chain and a light chain including companies are produced by CDR grafting. The antibodies are capable of inducing apoptosis in normal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells are used to chain increations, and also to treat such diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lugus erythematosus, Hashimoto's disease, graft versus host disease Sjogren syndrome, pernicious anaemia, Addison's disease, actorederma, Goodpasture syndrome, Crohn's disease, cheumatoid arthritis, autoimmune haemolytic anaemia, sterility, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AlbS and transplant rejection (all claimed). (Updated on 25-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                 The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Ras/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a tentaning regions) to antibody HFETA, via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autofimmune diseases, allergy, attentosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft captoduced by hybridoma HFETA (FERM-BP-5828)
                                                                                                                                                                                                                       Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas

Murine anti-Fas antibody peptide fragment #6. (first entry)

Fas; antibody; murine; anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyromimetic; antirheumatic; anti-Fas; nephrotropic; nutinfertility; neuroprotective; antiarteriosclerotic; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome, Crohn's disease, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, allergy, insulin dependent diabetes mellitus, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis, transplant rejection.

EP990663-A2

05-APR-2000

```
This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents capoptosis in cells with a normal system, by inhibiting binding between apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-antidabetic, anti-allergic, anti-arthritic, antiviral, immunomodulatory, dermatological, immunosupressive, thyromimetic, antiviral, cantirheumatic, nephrotropic, antimifertility, neuroprotective, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell aurface Fas or inhibit it by competitive cinhibition of ligand binding. (I) are used to treat and/or prevent cinhibition of ligand binding. (I) are used to treat and/or prevent cinhibition of ligand binding. (I) are used to treat and/or prevent cinhibition of ligand binding. (I) are used to treat and/or prevent disease, Sjorgen's syndrome, spermicious or hypoplastic versus host disease, Slorgen's syndrome, Scordpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, mysathenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B. Cor D) or alcoholic, and tranglant rejection. (I) selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in multiple addisease models. (I) act on the active site of Fas, i.e. they minic the native ligand, do not induce liyer disease, and have reduced risk of inducing a human anti-murine anti-base, and have reduced of examine anti-pas antibody response. This sequence represents a murine anti-pas antibody response.
                                                                                                                                                                                                                                                                                  New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems.
                                                                                                                                                                                   Takahashi T;
                                                                                                                                                                                Tamaki I,

A, Molecule type: protein
A, Residues: 1-11 < WEI.
C, Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kay hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into l. C, Superfamily: immunoglobulin v region; immunoglobulin homology
C, Reywords: heterotetramer; immunoglobulin
F;16-94/Domain: immunoglobulin homology < IMM>
F;23-92/Disulfide bonds: #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ig kappa chain V region (CBPC 101) - mouse (tentative sequence)
